                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  630
complex suggests that it may contribute to prevent expression of genes that trigger the cell into mitcsis (By similarity).

-!-SUBURIT: Part of the E2F6.com-1 complex in G0 phase composed of E2F6, MGA, MAX, TFDP1, EAR3, BAT8, EUHMTASE1, RING1, RNF2, MBLR, BAT8 and YAP2 (By similarity).

-!-SUBCENLUAR LOCATION: Nuclear (Probable).

-!-SUBCENLUARITY: Contains 1 C4-type zinc finger.

-!-SIMILARITY: Contains 4 MBT domains.

expressibility. Its association with a chromatin remodeling
                                complex suggests that it may contribute to prevent expression of genes that trigger the cell into mitosis (By similarity).
SUBUNIT: Part of the ESF6.com-1 complex in G0 phase composed of E2F6, MGA, MAX, TEDP1, CBX3, BAT8, EUHMTASE1, RING1, RNF2, MBLR, BAT8 and YAF2 (By similarity).
SUBCELLULAR LOCATION: NUCLEAR (Probable).
SIMILARITY: Contains 1 C4-type zinc finger.
SIMILARITY: Contains 4 MBT domains.

"Prediction of the coding sequences of unidentified human genes. X.
The complete sequences of 100 new cDNA clones from brain which can
code for large proteins in vitro.";
DNA Res. 5.169-176(1998).
In FUNCTION: Polycomb group (FcG) protein. PcG proteins maintain the
transcriptionally repressive state of genes, probably via a
modification of chromatin, rendering it heritably changed in its
expressibility. Probably plays a role in cell proliferation.
Overexpression induces multinucleated cells, suggesting that it is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "The DNA sequence and comparative analysis of human chromosome 20."; Nature 414:865-871(2001).

                                                                                                                                                                                                   Isold=Q9Y468-4; Sequence=VSP 003903; ISSUE SPECIFICITY: Widely expressed. Expression is reduced in colorectal cancer cell line SW480 and promyelocytic leukemia cell
                                                                                                                                                                                                                                                                                                                           -1- SIMILARITY: Contains 3 mbt domains.
-1- CAUTION: Ref.3 (CAC18508) sequences differ from that shown due to erroneous gene model prediction.
required to accomplish normal mitosis.
SUBCELLULAR LOCATION: Nuclear; excluded from the nucleolus. Does not colocalizes with the PcG protein BMII, suggesting that these two proteins do not belong to the same complex.
ALTERNATIVE PRODUCTS:
Event_Alternative splicing; Named isoforms=4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HSLLCSLPTHLLAKLSFASDSQY -> MIDGBAF;

EMBO J. 19:4193-4203 (2000).

-!- FUNCTION: Polymerase that creates the 3' poly(A) tail of mRNA's.

Also required for the endorshbonucleolytic cleavage reaction at some polyadenylylation sites. May acquire specificity through interaction with a cleavage and polyadenylation specificity factor (CRF) at its C-terminus.

-!- CATALYMIC ACTULITY: N ATP + (nucleotide)(M) = N diphosphate + (nucleotide)(M+N).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      X-RAY CRYSTALLOGRAPHY (2.5 ANGSTROMS).

Nat. Genet. 18:84-87(1998).

-! FUNCTION: May function as a transcription factor.

-! FUNCTION: May function as a transcription factor.

-! SUBCELLULAR LOCATION: Nuclear (Potential).

-! DISBABE: Involves FORTI AND ENFISE. The resulting transcript is a which involves FORTI AND ENFISE. The resulting transcript is a possible candidate for stem cell leukemia lymphoma syndrome/SCLL.

-! SIMILARITY: Contains 5 MYM-type zinc fingers.

-! SIMILARITY: Contains 5 MYM-type zinc fingers.

-! CAUTION: Ref. 5 sequence differs from that shown due to a frameshift in position 330.

-! CAUTION: Ref. 6 sequence differs from that shown due to frameshifts

                                                                                                 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypetides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleorides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinibinin activity, chemcotactic/chemchietic activity, haemostatic and thrembolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GWCAINSKILVPPRTIHAKFTDWKGYLMKRLVGSRTLPVDFHIKMVESMKYPFRQGMRLE 120

Corporation proteins (CCYPR), which are encoded by AAF59643.

COTPR and agonists of CCYPR, which are encoded by AAF59643.

COTPR and agonists of CCYPR, which are encoded by AAF59690-AAF59643.

COTPR and agonists of CCYPR are used to treat diseases or conditions associated with an encoded expression of functional CCYPR, while CCYPR antagonists are used to treat diseases or conditions associated with conversexpression of functional CCYPR. Monoclonal or plyclonal antibodies to CCYPR may be used in enzyme-linked immunosorbet associated with compounds ex, antibodies, oligomorlectides and proteins (receptors) that specifically bind to CCYPR, cCYPR itself may be used to detect compounds that modulate the activity of CCYPR. CCYPR itself may be used to generate transgenic anial models of human can be used to generate transgenic anial models of human callsease, this respect to the expression of CCYPR. CCYPR cancels and proteins with respect to the expression of CCYPR. CCYPR proteins, nucleic acide, agonists or antagonists include immune, developmental and cell signalling disorders, and cell proliferative disorders include anaemia, epilepsy, arteriosclerosis, asthma, cancer, allergies, include anaemia, epilepsy, arteriosclerosis, asthma, cancer, allergies, and be and infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human cell cycle and proliferation proteins and polynucleotides are used to treat, diagnose and prevent immune, developmental and cell signaling disorders and cell proliferative disorders including cancer
                                                                                                                                                                                                                                                                                                                                                                                 Human cell cycle and proliferation protein CCYPR-36, SEQ ID NO:36

                                                                                                                                                                                                                                                                                           the encoded polypeptides (AAABB642-AAAB42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system and central nervous system diseases, and as Alzheimer's Perkinson's disease, Huntington's diseases, and shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, archored diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

```
The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast on ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, miltiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial isonaemias; (d) wound healing; (e) indectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                            Cytostatic, immunosuppressive, nootropic, neuroprotective, antiviral; antiallergic, hepatotropic, antidiabetic; antiflammatory, antiulcer; vulnerary, anticonvulsant, antibacterial; antifungal; antiparasitic; cardiant; gene therapy, cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes assemblages and computer readable media comprising novel human cDNA sequences and clones derived from human foetal brain, foetal kidney, melanoma, testis and amygdala cDNA libraries. ABA33702 to ABA33766 represent human cDNA sequences from the present invention which encode the proteins given in ABB0562 to ABB05729. The human cDNA sequences and clones can be used in gene therapy. The clones may be used in a variety of applications, for example they may be used in profiling assays, for providing large arrays of human genetic material for implementing large-scale screening strategies and for treating diseases via gene therapy procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

transcription factors, splicing factors, capping factors, transport proteins, translation factors or replication factors that modulate HSC activity, especially differentiation or replication. The invention provides claimed methods: for identifying PHSC-specific nucleic acids; for generating a stem cell/progenitor cell from PHSCs; for identifying the presence of a PHSC in a sample; for identifying the presence of a PHSC in a sample; for identifying the presence in a sample of a compound that modulates HSC activity; for using such a compound to treat an immune system acondition, especially leukaemia; for introducing exogenous nucleic acid into a HSC; and for ex vivo expansion of HSCs. Also claimed are vectors, host cells, and an antibody that specifically binds a

It is an example of claimed HSC-specific proteins (see AAY79176-93) predicted from novel isolated HSC-specific nucleic acids (see AAY79131). The HSCs are especially primitive HSCs (PHSCs) such as umbilical cord cells, bone marrow cells and foetal liver cells. The encoded proteins are growth factors,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                     The present invention relates to methods and compositions for detecting an angiogenesis-associated transcript in a cell in a patient. The method involves contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polynucleotide sequences given in the specification. These angiogenesis-associated polynucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue cubargoing angiogenesis. The method and the polynucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polynucleotide sequences are also useful in the gene therapy of such disorders. The angiogenesis-associated proteins encoded by the polynucleotide sequences are useful in as a vaccine for therapeutic and prophylactic immunisation. The present invention describes a substantially pure nematode C. elegans (Caenorhabditis elegans) nucleic acid (I) encoding a LIN-8 polypeptide (see ABB78649), or LIN-6 polypeptide (see ABB78649), or LIN-6 polypeptide (see ABB78649), or LIN-6 polypeptide (see ABB78650), where the polypeptides comprise at least 130, 110, 130 contiguous amino acids of the 386, 322 and 498 amino acid sequences given in ABB78649 to ABB78650, and modulate cell proliferation. (I) has modulating proliferation of a cell, and for identifying the compound that modulates cell proliferation. (I) is useful for modulates cell proliferation. (I) can be used for identifying the compound that modulates cell proliferation disease, or an increased chance of developing the disease, by measuring lin-8, Lin-56 or Lin-61 proliferation disease, or an increased chance of developing the disease, by measuring lin-8, Lin-56 or Lin-61 polypeptide in the sample using Ab or measuring amount of lin-8, lin-56, lin-61 mRNA in the sample. (I) is also useful for identifying the compound that modulates cell proliferative diseases including cancer, as well as in diagnosing and treating cell proliferative diseases. (I) is also useful for identifying the compound that modulates conducting cell proliferative diseases uch as mammals and may be used to identify therapeutic compounds. The present sequence represents a human hyp (heat shock procein) protein which is given in comparison with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  vulnerary; antiinflammatory; immunomodulator;
rebroprotective; cytostatic; rheumatic; gene therapy;
                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insectiodes. Therefore in higher eukaryotes for the development of insectiodes, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL05611), expressed DNA sequences (ABL01840-ABL06115) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CSVNNISVTPPNGYDSRTFTWEGYLRDTGAVAAGQHLFHRIIPDHGFEVGMSLECADLMD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTB). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate hemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions of the inmutities, and to treat nervous system disorders e.g. parkinson's disease. The present sequence is a protein of the invention.

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP68949) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative disorders (cancer), neurodegenerative disorders (scancer), neurodegenerative disorders scales), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cell-proliferative disorder; neurodegenerative disease; bacterial; Parkinson's disease; Alzheimer's disease; autoimmune disease; Alzheimer's disease; autoimmune disease; autiliple sclerosis; disbetes; genetic disorder; wound; burn; infection; arthritis; cytostatic; immunomodulator; noctropic; neuroprotective; antiparkinsonian; antidiabetic; immunosuppressive; dermatological; haemostatic; vulnerary; fungicide; antibacterial; virucide; protozoacide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ren F;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genome mapping; gene therapy; food supplement; virus; fungus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotides comprising sequences assembled from expressed agequence tags (ESTS), useful for treating cell-proliferative, neurodegenerative, autonimmune, genetic, myeloid or lymphoid, or platelet or coagulation disorders

polymerase chain reaction (PCR) Primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuleorides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in generating antibodies against it, defecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating in medical in polypeptide and polymoleculae sequences have applications in disorders involving aberrant protein expression or biological activity. The polypeptide and polymolecules sequences have applications in dispnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human dispnostic amino acid sequences of the invention.

Oute: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IHAKFIDWKGYLMKRLVGSRTLPVDFHIKMVESMKYPFRQGMRLEVVDKSQVSRTRMAVV 135

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, osteopothic, cytostatic, anti-HIV, haemostatic, nephrotropic, contemporatic, anti-HIV, haemostatic, nephrotropic, antianaemic, artiposoriatic and heparotropic activity. The polymucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polymucleotides are particularly useful for diagnosing treating or preventing cell particularly useful for diagnosing treating or preventing cell printing in the disconse, including adenocarcinoma, lumphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's disease, acquired immunodeficiency syndrome (AIDS), Goodpasture's syndromes, inflammation, setcoporosis, thrombocytopaenia, psoriasis or hepatitis. ABUI1450-ABUI1445 represent the MDDT polymucleotides encoded by ABUI1450-ABUI1845 represent the MDDT polymucleotides encoded by ABUI1450-ABUI1845 represent did not form part of the printed specification, but was obtained in electronic format from WIPO at the printed specification, but was obtained in electronic format from WIPO at

```

This invention describes a novel disease detection and treatment molecule bylypetide (MDT) which has anti-inflammatory, immunosupressive, osteopethic, cytostatic, anti-inflammatory, nephrotropic, antipaoriatic and hepatotropic activity. The polynucleotides

```
protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polymucleotides are particularly useful for diagnosing, treating or preventing cell particularly useful for diagnosing, treating or preventing cell profilerative disorders (e.g. cancers including adenocarcinoma, cell-ukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, CC disease, acquired immunodeficiency syndrome (AIDS), Goodpasture's syndromes, inflammation, osteoporosis, thrombocycopenia, psoriasis or syndromes, inflammation, osteoporosis, thrombocycopenia, psoriasis or by ABU11450-ABU11845 represent the MDDT polymucleotides encoded by ABU11450-ABU11845, described in the disclosure of the invention.

C NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at the printed of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              188
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                208
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        358

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
